be-Core

Feminine hygiene - Light incontinence

ADL + Absorbent Core

be-Core is a result of Texus' strategy for creating materials with integrated and synergetic functionalities. *be-Core* is an Innovative material that combines absorbent Core and ADL functionalities in a single, flexible and soft structure designed for feminine hygiene and light inco products.

This innovative structure combines the liquid acquisition and distribution performance of airtthrough bonded substrate with the superior absorbency and retention of the special SAP masterbatch.

SAP is incorporated in the substrate together with other fillers that help prevent gel blocking and enhance the complete usage of the pad.

be-Core's main features are:

- Good absorbency and retention;
- Flexibility and body conforming;
- Sustainable thanks to its cellulose-free construction;
- Simple converting process: it can be easily converted on machinery for panty liners, sanitary napkins and light inco pads by simply unwinding it on the core or ADL station.
